More Possibilities. The Scaffolding System.

## BRIDGING BOGGO ROAD

Rovera Scaffolding has provided an amazing solution for this large-scale infrastructure project. The FW System, combined with Layher Allround, allowed the scaffolding structure to be built safely on the ground before being lifted into place with a crane. This saved a substantial amount of time, resulting in a quick and safe solution for their customer.

Large spans of 20 meters or more are achievable through clever design by Layher. By utilizing our FW System and other integrated components, we collaborate with our customers to provide "More Possibilities."

"The scaffold stayed level after we took out the jacks, prior to lifting the frames into position," stated Bobby Milicevic, Director of Rovera Scaffolding. "The team was quite pleased with the result."

Thank you, Bob, for sharing the images.
